

## GET IN SHAPE FOR THE WINTER WITH WEST SIDE TRACTOR'S ARTICULATION JOINT SPECIAL

### IT'S TIME TO TIGHTEN UP THAT MID-SECTION

Loose or worn articulation joints can cause erratic steering response, deteriorated ride quality, and make the machine difficult to control when roading.

West Side Tractor would like to help you get your Mid-Section back in shape and give your tractor that new machine feel once again.

West Side's articulation joint special includes parts and labor to replace the upper and lower pins, bushings, spacers, and shims needed to bring your articulation joints back to new specifications.

Line bore and machining services are additional if necessary.

**Special offer is good for in shop services at one of our 5 locations.**
